

Django Machine Test – Library Book Management System

Objective

Develop a Django application to manage books in a library.

Model: Book

Create a **Book** model with the following fields:

Field	Type
title	CharField
author	CharField
price	DecimalField
published_date	DateField
available	BooleanField

Requirements

1. Add Book

Create a form to add a new book.

Validation:

- All fields are required except **available**.
 - Price must be greater than 0.
-

2. View Books

Display all books in a table showing:

- Title
- Author
- Price

- Published Date
 - Availability Status
 - Actions (View, Edit, Delete)
-

3. Update Book

Allow users to edit existing book details.

4. Delete Book

Allow users to delete a book after confirmation.

5. Book Detail Page

Display complete information about a selected book.

6. Search

Implement a search feature that allows users to search books by:

- Title
- Author

7. Filter

Provide filters for:

- Available Books
 - Unavailable Books
-

Expected URLs

/books/

/books/add/

/books/<id>/

/books/edit/<id>/

/books/delete/<id>/
