

Django Machine Test – Online Quiz System

Duration: 3 Hours Maximum Marks: 100

Instructions

- Use Django (without Django REST Framework) to build the application.
- Use SQLite3 or MySQL as the database.
- Use HTML, CSS, and Bootstrap for the frontend interface.
- Follow proper MVC architecture and Django best practices.
- The application must be fully functional.

Section A – User Authentication (15 Marks)

- User Registration
- User Login
- User Logout
- Only logged-in users should be able to take quizzes.

Section B – Quiz Question Management (25 Marks)

- Admins can add new quiz questions.
- Admins can update existing quiz questions.
- Admins can delete quiz questions.
- Each question should contain Question Text, Four Options, and the Correct Answer.

Section C – Taking the Quiz (30 Marks)

- Display quiz questions to users.
- Each question must be multiple-choice.
- Users should select one option per question.
- Store user responses in the database.

Section D – Score Calculation (20 Marks)

- Evaluate answers after quiz submission.
- Compare user answers with correct options.
- Display the final score to the user.

Section E – Admin Dashboard (10 Marks)

- Admins should be able to view all quiz questions.
- Admins should be able to manage question lists.

Suggested Database Models

- User

- Question
- Option
- UserAnswer
- QuizResult

Submission Requirements

- Complete Django Project Folder
- Database file (if using SQLite)
- Screenshots of the working application
- README file explaining how to run the project
